

FLU STRAINS CHANGE FROM YEAR TO YEAR.

OUR TRUSTED PARTNERSHIP REMAINS THE SAME.

Every March, FDA selects strains for the U.S. that go into the flu vaccines.¹

CDC and global surveillance data show B/Yamagata lineage viruses haven't been detected since March 2020.²

FDA and WHO have strongly recommended that the "inclusion of a B/Yamagata lineage antigen in quadrivalent influenza vaccines is no longer warranted, and every effort should be made to exclude this component as soon as possible."^{2,3}

Therefore, FDA announced that only trivalent influenza vaccines will be available in the U.S. for the 2024-2025 flu season.

We are committed to providing uninterrupted supply and timely delivery to our customers with our 2 separate, secure locations for manufacturing vaccines.
